Hacker News Redesign

[Street Address] [City], [State] [Postal Code]
Phone: [Your Phone] Fax: [Your Fax] E-Mail: [Your E-Mail]

Objective

While Hacker News is a wonderful resource for up-to-the minute events in the tech community, its design often gets in the way of its primary use case—content discovery and consumption. The vast majority of users I’ve encountered (myself included) visit Hacker News exclusively for that purpose and do not want to be distracted by unnecessary features. I am proposing a redesign that takes this into consideration, aiming to provide casual users with first-rate consumption experience. To this end, the design will incorporate large fonts, realtime updates (without refreshing) and automatically-generated summaries of the links’ HTML contents. Most features concerning user interaction will be jettisoned, with the exception of the ability to “like” a story.

Firestore is Joining Google

Over the past three years, we've gone from a crazy idea that 'just might work' to a proven product used by 110,000 developers. Today, I couldn't be happier to announce that we've joined Google.
